To Whom it may Concern

Introduction

Ronin (SA) is a High Risk Close Protection and Remote Medic training academy situated in Cape Town, South Africa. We pride ourselves in the provision of relevant and effective tuition in both disciplines. We couple with this a high degree of practical experience within South Africa's most at risk areas, the townships. Naturally this presents challenges to the safety of students and as a result, we are constantly on the lookout for products that can make the real life delivery of this tuition viable and safe within this unique training environment. Please see www.ronin.co.za

Findings

In January of this year, PPSS offered to provide Ronin with a CV1 and EV1 vest to analyze and review due to our unique climate and needs namely – low profile close protection and para-medicine. As you know South Africa has some of the highest murder rates per capita in the world and as such is viewed as an "at risk" environment.

To date, we have deployed the vests in both close protection and paramedic roles. We found the vests to be very low profile and this aspect allows for a greater level of diplomacy, as one is not perceived to be "wearing body armor". As such you are perceived to be far less of an aggravator to any situation, but rather you are a safer mediator.

Another excellent quality of the vest is the management of heat utilizing "Outlast" technology, as you can imagine this is of utmost importance in South Africa.

We strongly recommend this product line in our academy and have no hesitation in recommending it to any professional in need of low profile, yet highly effective, covert body armor.We are available to any party for further clarification regarding our experiences of this product.

Thanking you in Safety, Security and Service.
