SlashPRO® Clothing & Gloves

The risk of being slashed with a weapon is very much a reality for professionals working within hostile environments namely, homeland security, prison and correctional facilities and in law enforcement.

SlashPRO® Clothing & Gloves can effectively help reduce the risk of such injuries, offering BS EN 388:2003 blade cut resistance level 5.

Slash related injuries can of course become infected and, even worse, lead to potentially life threatening injuries through blood loss. Equally, life changing physical injuries could occur which could ultimately be prevented.

This is not to mention the psychological trauma this could cause long term to the individual staff member who sustains such injuries.

SlashPRO® is the ultimate protection in the fight against this ever increasing problem. Staff assaults are on the increase within such environments, so it pays to protect staff against the very worst case scenarios.

Whilst the focus is very much on potential attacks against staff, it may be that, indirectly, staff are required to attend an incident of self-harm, where they are then potentially exposed to risk of attack and a slashing of some description occurring.

“ I performed multiple tests on the durability of the SlashPRO® shirt. I utilized straight and serrated blades while testing the shirt. I did not have any success piercing through the arms or shoulder area of the shirt. I believe the shirt works very well for its intended purpose.”

- Deputy Henry Schneider - Santa Rosa County Sheriff's Office - Team Leader / Emergency Response Team - Tactical Corrections Operator

Why is SlashPRO® Clothing So Important?

- Attacks in prisons are on the increase. There were 5,423 assaults on prison staff in the 12 months to the end of March 2016 - a rise of 40% on the previous year. This is only likely to increase further over the coming years.
- Attacks on police officers, who sustained injury, topped 7,903 in 2015. This was from a total of 23,000 reported to Health and Safety departments within police forces in the UK.
- In the USA, the FBI conducted a survey in 2013 on the number of officers assaulted with knives/blades. These were higher than the amount of attacks using firearms. This number has increased year on year up to the present day.
- According to the 2013 Correctional Officer Wellness and Safety Literature Review, correctional officers are involved in the highest amount of non-fatal violent encounters than any other occupation.
- A study by the National Institute of Justice in 2007, discovered there are approximately 2,000 correctional staff member injuries annually due to violence against officers by inmates.
- The BBC in the UK reported on 16th April 2014 that the number of serious attacks on prison officers by inmates increased by 45% in two years, figures released by Labour have revealed. In 2012, a total of 543 assaults on prison officers were referred to the police – up from 374 in 2010.
- A 2015 study in the U.S. concluded that for every 10,000 full-time Corrections Officers, there were 254 workplace assaults and violent injuries reported in 2011 that's 36 times the rate for all American workers. In 2013, 15 workplace fatalities of correctional workers were reported nationwide, in a workforce of nearly 470,000 people.
- On 27th February 2016 the UK based Mirror Newspaper claimed that prisoners have assaulted more than 1,000 prison officers in just two months. These include 95 of the highest category 'serious' assaults on staff, such as being slashed with homemade weapons. The two monthly totals is equivalent to more than 16 prison officers being attacked each day. The figures show that 905 officers were victims of the lesser 'assault' during this period. This represented a surge of 15 per cent.
